It is used by a large number of experiments and projects in a variety of application domains, including high energy physics, astrophysics and space science, medical physics and radiation protection. Sun, 11 Nov 2018 12:20:00 GMT Recent developments in Geant4 - ScienceDirect - Enactivism argues that cognition arises through a dynamic interaction between an acting organism and its environment. It claims that our environment is one which we selectively create through our capacities to interact with the world. " Organisms do not passively receive information from their environments, which they then translate into internal representations.
